Calonie Gray, Ph.D., is a research analyst at Children’s Services Council (CSC) of Broward County, Florida, a county governmental agency. She received her doctorate degree in developmental psychology from Florida International University, and is currently working on a graduate certificate in epidemiology and biostatistics. She is interested in the relations between adolescent development and familial variables. Specifically, her current research interests comprise adolescents’ substance use trajectories and all impacting familial processes, particularly maltreatment within the family context. Her interdisciplinary training has afforded her the vocabulary to articulate how issues such as maltreatment and substance use experienced in adolescence are as critical public health issues as more prominent topics, such as autism and obesity in youth. She has received extensive training in advanced methodologies and statistical analyses. She has received numerous awards, including the Florida Education Fund’s McKnight Doctoral Fellowship, American Psychological Association’s Society for Multivariate Experimental Psychology training award, and National Hispanic Science Network (NHSN) Summer Training Institute Fellowship. She was recently awarded a summer training award in research methods at the University of Michigan by the Emerging Interdisciplinary Scholars Network (ESIN). More recently, she and her colleagues were awarded funding by the CSC to conduct independent research on child maltreatment among ethnic minorities and the overrepresentation of ethnic minorities in child protective services.
